Rubber Bud Strips

Order now to assure your supply when you need them next summer.  
Manufactured from natural rubber.

Nurserymen who used these strips before the war preferred them to all other materials for tying buds. They are easier to apply and better stands result. Because they stretch with the increase in diameter of the understock, there is no danger of their girdling the stock and killing the bud. They do not need to be cut off like raffia or string, thereby eliminating a very considerable item of expense.
